

Donaldson® steam trap and condensate drains are designed for use on our P-EG filter housings.

The P-EG filter housing can be used to filter both steam and air or technical gases. The housing orientation is dependent on how the housing is used. When filtering steam, the flow goes from out-to-in across the filter element. When filtering air or technical gases, the airflow is in-to-out across the filter element.

The kits include a stainless steel, free floating lever drain as well as components to assemble with our P-EG housing. The float drain includes a hemispherical valve, seat, lever and guidepost that ensure a positive and leak-free seal under all conditions.

Steam Trap/Condensate Drains

FEATURES	BENEFITS
Kit includes all components needed for P-EG drain port installation	Easily adapts to Donaldson P-EG filter housing when a condensate drain or steam trap is required
Float drain includes hemispherical valve, seat, lever and guidepost	Ensures a proper leak-free seal under all conditions
No electricity required	Installation is easy and suitable for remote facility locations
Self-regulated	Float drain operates as needed
